

Academy 2024h1

Mini-project week 2:

Initial considerations:

1. Document your results with screenshots. You do not need to show all the mistakes you made in the process, but you can save them and share them on the day of the presentation.
2. From this week onwards, we will be using Git as our local repository and a remote repository simulator (for this week it will be Gitea). Gitea will be used in a container.
3. You should submit a pdf file with the evidence and with the format `<globant user>-MiniProject-<week>`, for example: `juan.quinayas-MiniProject-2.pdf`.

Part 1: Java

Use a Dockerfile to deploy a container with Hello Wolrd in Java

Part 2: Java + Maven OR Gradle

Use a Dockerfile to deploy a container with Hello Wolrd in Java + Maven OR Gradle

Part 3: Gitea

Use a Dockerfile to deploy a Gitea container

Upload all resources related to Part 1
